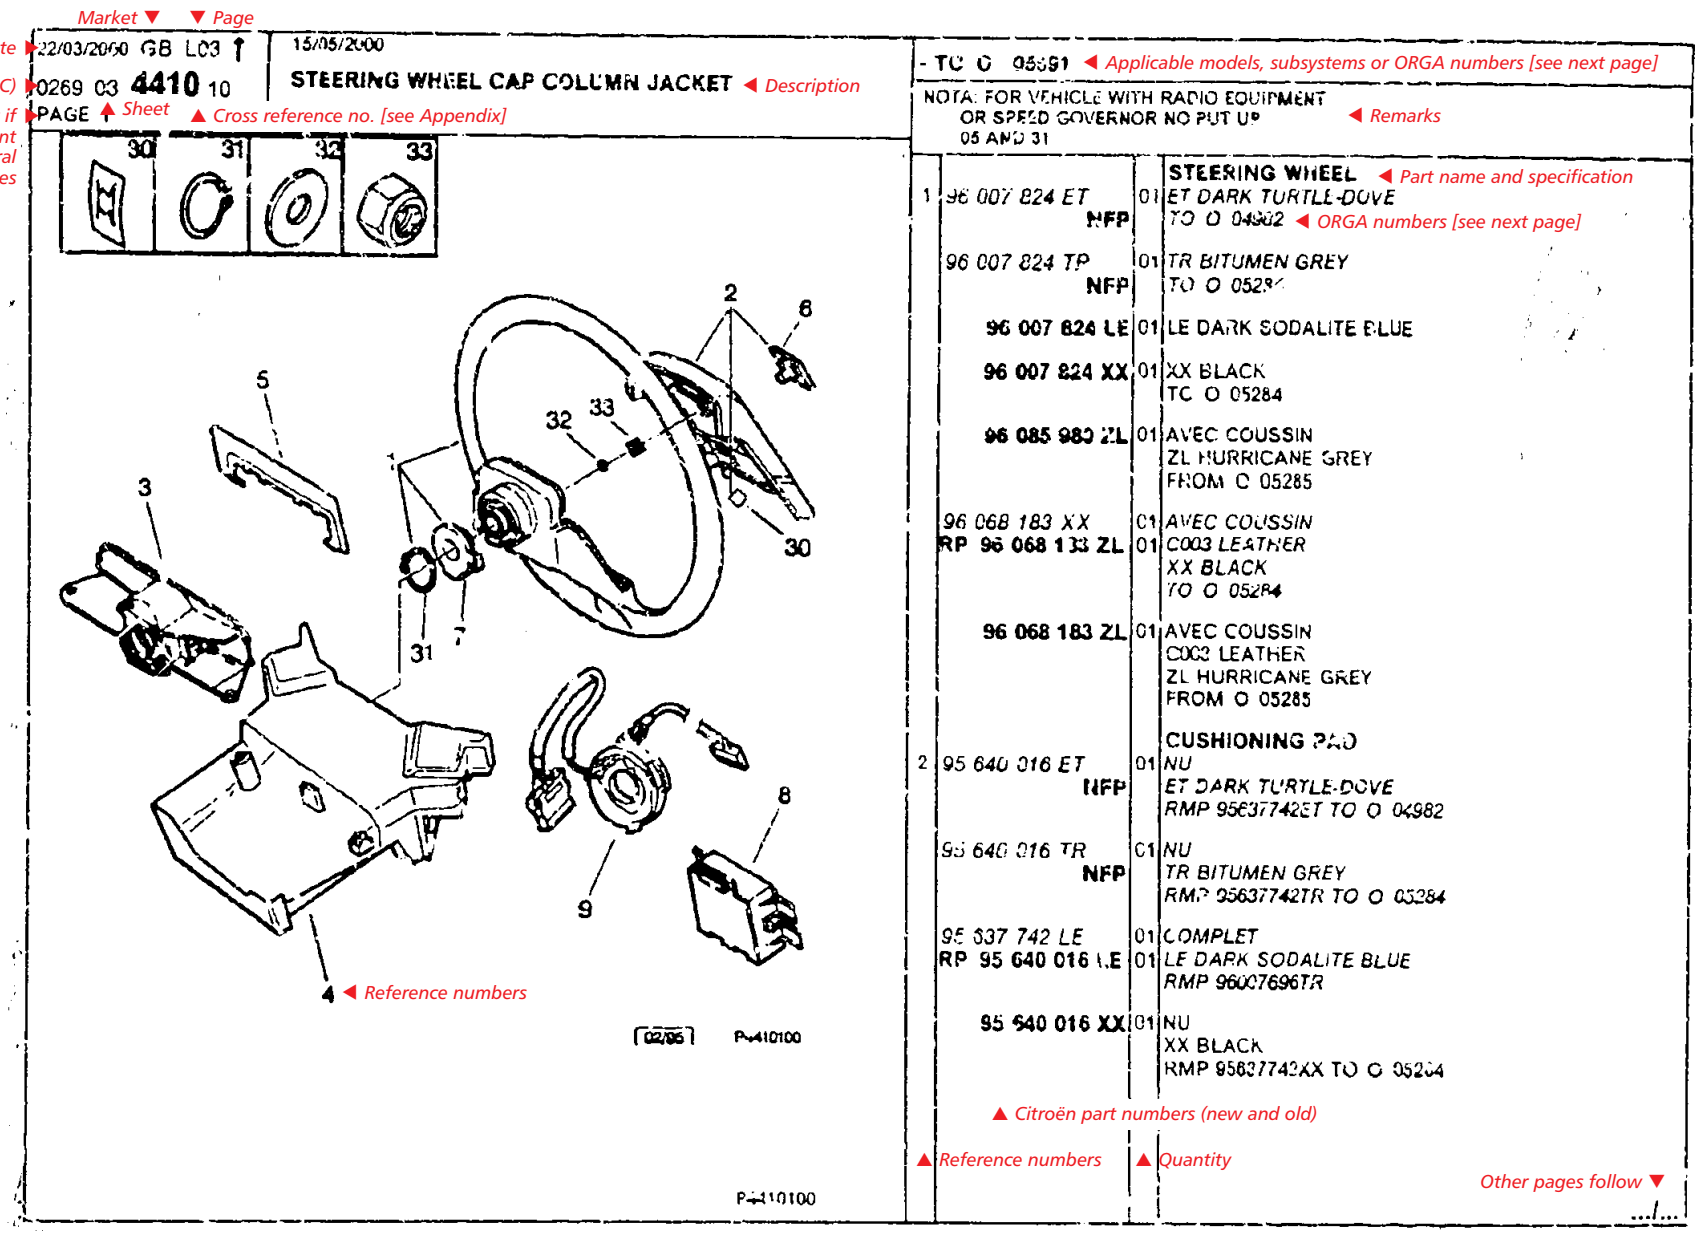
Legend *How to read the fiche?*



A fiche *set* consists of several fiche *sheets,* each depicting a large number (200 or more) of individual fiche *pages.* Each page has its own *drawing number,* referenced from the cross reference charts in the Appendix.

The left column shows the components with reference numbers while the right column gives model information and the actual descriptions and Citroën part numbers for all referenced, individual parts.

Freely distributable document. Selling is prohibited.

Legend *ORGA Numbers*

The organization number shows the day when your car was actually assembled on the production line. The dealers and parts stores use this number (sometimes also called RP or Replacement Parts number) to identify the various parts and components fitted to your car.
On your car, the ORGA number can be found stamped on the left hand front door A-pillar, above the courtesy light switch.
Calculating the production date is very easy using the following table. Locate the largest number in the table still less than or equal to your organization number. To see an example, let's assume the number is **4859.** Then the largest number will be **4832** in the cell **February 1990.** Just subtract this number from your organization number to get the day of the month of the production of your car (in our example, **4859 – 4832=27** yields ***February 27, 1990).***
If you receive the non-existent date zero (this happens when your organization number is not greater than but equal to the number in the table), simply take the last day of the previous month. For instance, for the organization number **5013** the largest number in the table is **5013** in the cell **August 1990,** subtraction results in **zero,** hence the production date is ***July 31, 1990.***
